CHARACTERISTICS

AL-43FC is aluminum silicon welding rod filled with corrosive flux. The combination of filler metal and flux allows simple operating and perfect bonding. The welding deposit is free of cracks and pores. Wash weld seam after completion.

APPLICATIONS

Welded joints and surfacing on aluminum and aluminum alloys like Al-Si 5, Al-Mg-Si 0.5, Al-Mg-Si 0.8, Al-Mg-Si 1, Al alloys with less than 2% alloying elements, and Al cast alloys up to 7% Si. Suitable for tank constructions, aluminum constructions, street metalwork and automobile industry.

TYPICAL CHEMICAL COMPOSITION OF WELD METAL (%)

Si	Fe	Al
4.5-5.5	<0.4	Bal.

TYPICAL MECHANICAL PROPERTY OF WELD METAL

Tensile Strength (N/mm ²)	Elongation (%)	Elongation Limit (0.2%)	Melting Range (%)
120	8	> 40 N/ mm ²	573-625 °C

PACKAGING

Diameter (mm)	Length (mm)	Weight (kg)
3.0 X 800	820	1
